

IN THE SPECIFICATION

Please replace the paragraph beginning at page 7, paragraph 32, with the following rewritten paragraph:

In the embodiment shown in Figs. 7A and Fig. 7B, the lower core 44 and upper core 48 are attached by a pair of matching plates including a lower core mounting plate 92 and an upper core mounting plate 94. The core mounting plates 92 and 94 have a plurality of matching fastening holes 96 and are attached by a plurality of fasteners 98. The upper core mounting plate 94 can be rotated and fastened to the lower core mounting plate 92 in several combinations of the matching fastening holes 96 to allow the upper core 48 to tilt in several different directions relative to the lower core 44. The lower core mounting plate 92 in ~~Fig. 7~~ Fig. 7A is shown in a plane perpendicular to the axis of rotation 46. The lower core mounting plate 92 in ~~Fig. 7A~~ Fig. 7B is shown mounted at an angle to the axis of rotation 46 to allow a further range of angular adjustment of the upper core mounting plate 94 and thus the upper core 48.
